Setup

Requirement:

Running SQL of table and sample data given in the XXX folder in your own oracle data server in advance.

While accessing the system, a pop-up window of giving option of initializing the system appear.

Please click "Yes" for setup, if this is your first time of opening the system

Functionalities

User Account Registration/Login

By the time the system launched, options for registration and login are given:

Account Registration

For new customers accessing our Online Shopping System (OSS), customers are required to register a user account.

If user does not have account, "Register" will be the preferable choice.

Enter Username and Password as example demonstrates bd. Click "OK" after you finish.

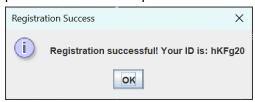

Notification of the result of registration returns after a request is made.

*Username must be unique. Therefore, a repeated username may cause registration fails."

Once the request is accepted, the message of registration success returns your account is created.

Press "OK" to close the panel and continue operations.

Login

For customers, customers can access the shopping system after logging in their own accounts.

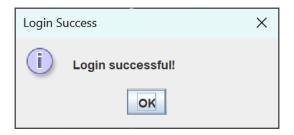

Customers are required to input the username and password to access their own accounts.

After entering the account information, press "OK" to continue.

After sending a login request, a page will display the result of the login attempt. If the login is valid, a pop-up window of "Login successful!" will appear.

To access the shopping system, click "OK" to continue.

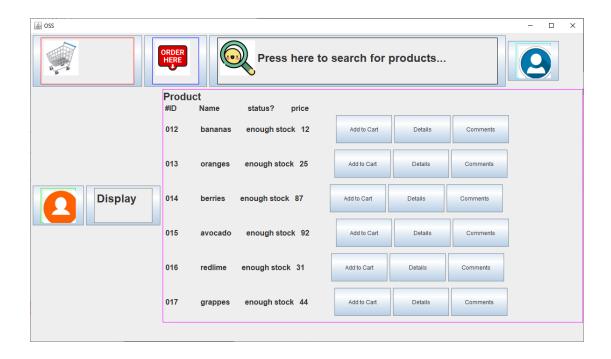

If you see the error message, it may be caused by an error input of the user name and password. If you are sure that the inputted value, it probably caused by the oracle server error. You may login again later.

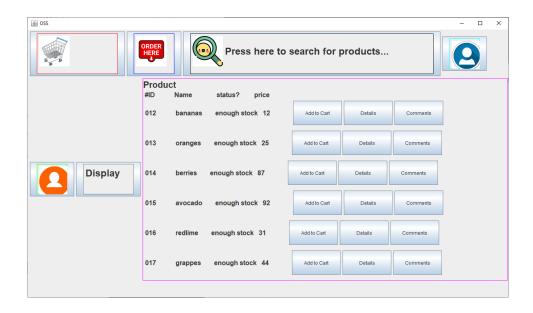

After logging in successfully.

The following page will open, which is the home page of the shopping system.

Product Listings and Search

System / Database manage

Admin

Following functionalities are implemented within admin's homepage.

Adding Products

Admin are able to add a new product into the shopping database via the pop-up window appear after clicking "Add product".

To add a product to the database, admin user are required to enter the information of the product including name, price, category ID and description in a commaseparated text.

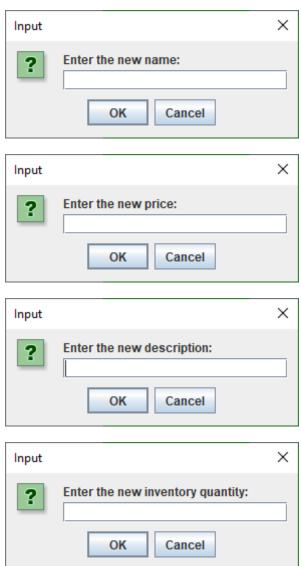

"Name, Price, Category Id, Description"

Editing Products

Function for editing current exist products are also implemented in the admin's page. A pop-up window appears after clicking the "Edit" buttons in the product list of admin's page.

Options of "Edit Name", "Edit Price", "Edit Description", "Edit Inventory" and "Delete Item" are given.

For each property, enter the wanted change in the textbox and click "OK" to modify the property of the product,

and for deleting item, the item is deleted in **customers' view** once the button is clicked. **The item remains in admin's view**.

For returning to normal users to take a better view as a customer while evaluating the UX of customers.

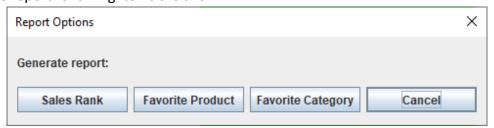

Clicking the user icon button on the top right corner show a pop-up window for returning.

Input "Y" in the text box and press "OK" to return to the customers' view.

Reporting and Analytics

Admins can generate a report to gain a better vison of the market, evaluating performance, gaining audience insights, and supporting decision-making. In the report following items are shown:

Sales Rank: ranking of product sales.

Favorite Product: ranking of products with refer to user rating.

Favorite Category: Most sales with refer to category.
